

## **Motorized FlexShade System by Draper, Inc**

### **Specifications**

#### **Equipment**

Electric Operator: Drive unit inside roller, 4-wire, instantly reversible, lifetime lubricated. Right hand motor location standard. Left hand available. Adjustable limit switches, thermal overload protector and electric brake. Operates on 110-120V

AC 1 PH 60 HZ current. Draws 1.2 Amps. For controls, see IntelliFlex® Controls

Reference Sheet and IntelliFlex Controls Planning Sheet.

#### **Hardware**

Rollers: Size – 2" dia. with .080 wall, in steel or extruded aluminum. 3" dia. Steel tube available. Roller assembly easily removable.

Mounting Brackets: 1018 plated steel stamping. Sizes 1-5/8" and 2-1/4". Styles for mounting to wall, ceiling, or jamb. Brackets do not require additional adapters.

Roller Idler Assembly: Type 6/6 injected molded nylon and a zinc-plated cold rolled steel pin. Sliding pin for easy installation and removal of the roller.

Slat: Aluminum, min. 1/8" x 1", encased in heat seamed hem.

Endcaps: 1028 steel stamping. 2 sizes: 3-1/4" x 3-3/4" and 4-1/2" x 4-1/2". Complete with adapter roller bracket. Installs to wall, ceiling, or jamb. Accepts snap-lock fascia or headbox. Silver (standard), black, white, ivory or charcoal bronze powder coat finish available.

Endcap Covers: Plastic covers snap onto endcaps. Available in ivory, dark bronze, black or white to match fascia.

Fascia: L-shaped cover of extruded aluminum, .060 wall. Snap-lock assembly to endcaps without exposed fasteners. Silver (standard), black, white, ivory, or charcoal bronze powder coat finish available. Continuous fascia available with coupled units.

Headbox: Standard consists of fascia, L-shaped back/top cover. Snap-lock assembly to endcaps. Optional, for pocket installation, includes a U-shaped back/ top/front cover with removable bottom closure panel. Small size: 3-3/8" x 3-7/8". Large size: 4-5/8" x 4-5/8". Some exposed fasteners required.

Type D Pocket: Type D Shade pocket to be fabricated of 6063-T5 aluminum alloy for perimeter installation. Accepts FlexShades installed with ceiling brackets. Finished in white paint. 4-1/2" x 4-5/8" x .125" with tile support lip and removable bottom closure. Not available with 3" roller.

Coupler Assembly: Coupler: Type 6 nylon. Coupler pins: 1018 zinc plated steel.

Coupler brackets: 1018 zinc plated steel painted white with center steel bushing. Allows for one motor to drive up to 4 additional shade rollers. Overall width of group not to exceed 30'. Coupler assembly to fit 2" or 3" dia. rollers with adjacent rollers of the same diameter.

Please note: Dimensions of rollers, operators and hardware at manufacturer's discretion.

## Draper Shades—Since 1902

DRAPER, INC.—a traditional leader in educational window shades and audio visual projection screens—also manufactures FLEXSHADE SYSTEMS, the finest commercial window coverings. This custom shading SYSTEM allows for almost unlimited flexibility in solar control. Quality is assured by DRAPER's 104 years in the window coverings industry.

FLEXSHADES provide glare control, heat control and room darkening anywhere windows or skylights are found: classrooms and gymnasiums; offices, boardrooms and training rooms; military installations and laser labs; hospitals, extended care and nursing facilities; residences and home theatres; museums, darkrooms and any skylit space.

DRAPER FLEXSHADES and INTELLIFLEX controls integrate fully into any audio-visual installation where our projection screens and video projector lifts and mounts are specified. With the most comprehensive range of projection screens and related products in the world, we offer a solution for virtually any presentation need. Intelligent design, quality materials and careful attention to detail ensure flawless performance in your new building.

DRAPER's motorized projection screens, video projector lifts and FLEXSHADES can be operated in a variety of ways including two-way serial communication, network communication or Ethernet, low voltage control, radio frequency remote control, infrared remote control and single station control. DRAPER's products also work in conjunction with other manufacturer's controls, such as Crestron, Extron and AMX. You can fully automate your screens, lifts and shades.

For the finest in sunlight control—specify FLEXSHADE.

## Custom Shading

Each FLEXSHADE product is built to order. Fabric, hardware and operating mechanisms are specified to satisfy functional and aesthetic criteria—DRAPER builds each unit for an exacting fit.

DRAPER offers the broadest variety of operator styles in the industry. Options include bead chain clutch, crank, spring roller, motorized roller-operated shades, and manual and motorized Roman shades.

Our spectrum of fabric colors and styles is unmatched. Woven mesh fabrics offer protection from heat, glare and UV rays, while maintaining the view. Soft translucent textiles offer designer appeal. And our opaque fabrics eliminate all visible light. Combine them with a LIGHTBLOC SYSTEM, and you will achieve total blackout. All fabrics are fire retardant.

The smartest shades are controlled with

# IntelliFlex®

The shade control system with real brains.

The INTELLIFLEX® SYSTEM is a breakthrough in intelligent controls. It offers a range of relays to control any type of motorized window covering. This relay system allows for bus communication control of a motor or group of motors through a wide range of input devices including infrared, radio frequency, dry contact, standard wall switch, and RS232.

- All INTELLIFLEX components carry a Lifetime Replacement Guarantee (excluding timer and touchpad IR transmitter). Fully warranted against factory defects for life—superior to any other control system.
- Activate up to four intermediate stops.
- Automatic recalibration when shades go to upper or lower limits.
- Can be installed in group panel, or individually in junction boxes—drastically simplifies wiring requirements.
- The most sophisticated high voltage system on the market.
- Programmable through IR & RF transmitters, LCD learning IR transmitters, PCs, and keypads.
- You can control the system through the internet, IR & RF transmitters, LCD learning IR transmitters, PCs, sun and wind sensors, timers and wall keypads.
- Group, sub-group and individual control options available—as many as 360 combinations possible!
- Relays and controls are the most compact in the industry. Compact IR and RF receivers (send all 60 channels with 1 device!) plug into bus anywhere in the system.

## Group Control

### ISO-Relay

One isolating relay required for each motor. Allows you to daisy chain up to 12 ISO-Relays and control them using a single line voltage (110V-120V) switch. Operated by a standard SPDT 15-amp switch.

ISO-Relay

GC4

### GC4

Four isolating relays in an 8" x 8" enclosure can be grouped together in banks of three to control up to 12 motors operating on a single SPDT 15-amp switch.

### SGC4

SGC4

SGC4 allows control of up to 240 motors in groups of 4. Enables low voltage IR or RF controllers and remote programming.

## Individual and Group Control

### SC1

SC1

Each SC1 is an individual addressable and programmable single auto controller which has a microprocessor. Features include up to 4 intermediate stops, and a wide variety of input options (all shown at right).

If mounted in a deep gang junction box at motor location, no expensive home run wiring needed.

### SPGC4

SPGC4

Individual and group control of up to 60 motors, with up to 4 mid-window stops. 8" x 8" enclosure. All the flexibility of the SC1, in a centralized location.

## Controls/Input Devices

### Intelliflex Wall Switch

More than 50 combinations available in this intuitive, user-friendly wall switch.

The switch and its buttons are clearly marked and easy to understand. Site-specific overlay may be provided. Unlike competitive products, only one button must be activated per function—no cumbersome combinations required. Switch is capable of being reprogrammed to allow for various control scenarios. Switch may act as a group switch, an individual motor switch or any combination thereof.

This input device can be used with SC1, SGC4 or SPGC4. The INTELLIFLEX switch is also available as a dry contact switch, a fully programmable bus interface wall switch or a fully programmable RF wall switch.

### Sun Sensor

Automatically controls individual shade or groups of shades in response to the position of the sun. Can be used with SC1, SGC4 or SPGC4.

### R2D7 Professional Integration Interface

Acts as additional bus system input device allowing a facilities manager to send commands to shade motors at any time to position shades appropriately for maximum utility and efficiency. This input device can be used with SC1, SGC4 or SPGC4.

### Handheld Transmitter

Available in 6, 12 or 24 channels, IR or RF types. May act as a group control, an individual motor control or any combination thereof. This input device can be used with SC1, SGC4 or SPGC4. Requires receiver or "eye".

INTELLIFLEX may be controlled from any input device...wireless remote, PDA, PC... and many more.

## ALTUS by Somfy

Alternatively, the ALTUS radio-frequency, remote controlled motor system is available. This stand-alone, versatile system allows grouping of motors through programming. Capable of one mid-window stopping position. Choice of wireless input devices, including one- and four-channel handheld transmitters, wall switches, sun and/or wind sensors, and a home automation interface module. Broad transmitting range with simplified wiring.

### More details?

For more complete information about INTELLIFLEX components, visit our website, [www.draperinc.com](http://www.draperinc.com), to download technical documents.

### Keep it simple!

Just tell us what you need the system to do, and we'll design it for you.

# The Access System

## Draper's Most Versatile Shading System...

A simple extruded aluminum headbox installed during construction is the secret of the ACCESS SYSTEM. Our ACCESS headbox allows you, or the occupant, to make decisions about FLEXSHADE window treatments at a later date. Think of the headbox as a place-holder installed during the rough-in stage of construction. After the window trim is finished and field measurements taken, you can fill that headbox with the FLEXSHADE of your choice: manual or motorized, light blocking or light filtering, left- or right-hand operator and sized for a perfect fit.

(Due to the construction of the ULTIMATE ACCESS FLEXSHADE, the unit must ship factory assembled and without side channels. Details on page 5)

Even if the building's occupant changes color schemes, or DRAPER introduces a new shade fabric that is more suitable, it's no problem. It's quick, easy and comparatively inexpensive to replace the shade in an ACCESS. Find DRAPER'S ACCESS FLEXSHADE models below and on page 5.

## Access Dual Roller FlexShade

For a room with many purposes, choose the ACCESS DUAL ROLLER FLEXSHADE SYSTEM. This FLEXSHADE allows for both glare control and room darkening in the same opening.

Two complete shades are vertically stacked in a single headbox. The ACCESS DUAL ROLLER FLEXSHADE was designed to be ceiling recessed, but it can also be surface mounted. Choose from bead chain clutch, crank or motorized operation: both window shades will have the same type of operator. Combine a glare control fabric—mesh or translucent—with a free-hanging room darkening shade or with a LIGHTBLOC FLEXSHADE style (side and sill channels) for complete blackout. The ACCESS DUAL ROLLER FLEXSHADE headbox is white. Ceiling tile flange for a ceiling recessed installation is ¾" wide and optionally available. The bottom panel forms a slot for fabric passage and attaches easily without fasteners.

### Exclusive Features

The ACCESS DUAL ROLLER FLEXSHADE has a number of unique features:

- **Continuous pocket** may be installed in the ceiling well in advance of the shades, allowing for easy coordination with various trades.
- DRAPER's exclusive optional power connection allows for pre-wiring of the pocket at either end prior to window shade installation. This feature can eliminate the need for an electrician when the window shades arrive.
- Shades may be coupled within the SYSTEM, minimizing wiring and use of motors. (Coupled shades not suitable with LIGHTBLOC.)
- **Internal roller brackets** slide in a track, so they may be located wherever appropriate after the pocket is installed.
- **Movable suspension brackets** slide in grooves in the top of the extruded pocket for easy positioning and attachment to the overhead structure.
- Design is compatible with the optional side and sill channels, allowing the rear shade in the SYSTEM to provide total blackout.

### Typical Access Dual Roller FlexShade

Since the ACCESS DUAL ROLLER FLEXSHADE is engineered to meet the needs of specific installations, parameters may vary. Typically, choose a mesh fabric for glare control and UV protection, and a room darkening LIGHTBLOC for total light control. Maximum width for an ACCESS DUAL ROLLER FLEXSHADE is 12'. Maximum height for a LIGHTBLOC in this product is 10'. Larger sizes may be available: contact DRAPER.

## Access Dual Roller, Access & Ultimate Access FlexShade Fabrics

Fabric selection is illustrated on pp. 17-24. ACCESS and ULTIMATE ACCESS FLEXSHADES are on page 5.

For all Draper FlexShades: Operators are standard on the right-hand side. For all clutch operation, stainless steel bead chain is standard, plastic bead chain is optional. For all clutch operation, the optional chain hold-down is designed to keep children from getting tangled in the cord.

## Access FlexShade

The ACCESS FLEXSHADE is a single motorized or bead chain clutch operated shade in an extruded 12" aluminum pocket. Pocket can be spliced/linked to form other lengths. The ACCESS FLEXSHADE is a versatile ceiling-recessed shade, offering you the following benefits—

- The white extruded aluminum case can be installed in the ceiling quickly and easily during the “dirty” phase of the construction process.
- A flange along the front of the headbox supports acoustical ceiling tile, or trims the opening of any type of ceiling.
- A bottom panel forms a slot for passage of the shade, and is easily removed without tools for unobstructed access into the case for installation of the window shade.
- Case mounts easily with  $\frac{3}{8}$ " threaded rod anywhere along the length of the case, with lag screws through top of case or hanger wire in a grid ceiling.
- The shade (motor-in-roller or clutch with attached shade fabric) can be installed at a later date in seconds with patented, twist-in roller brackets. These internal roller brackets slide in a track, so they may be located wherever appropriate after the pocket is installed. Minimizes job site damage.
- Choose a glare control fabric—mesh or translucent—or a free-hanging room darkening fabric.
- Engineered for specific installations. Depending on fabric, maximum recommended height is 10'. Larger sizes may be available; contact DRAPER for details.

U.S. Patents  
6,421,175 and  
6,532,109.  
Other patents  
pending.

Mounting brackets  
rotate into slots, and  
can slide along case.

Internal roller brackets  
adjust to align shade.

# Ultimate Access FlexShade

The ultimate in shade design—a single motorized shade in an extruded aluminum case with an automatic ceiling closure that opens into the case. The ULTIMATE ACCESS FLEXSHADE is only available from DRAPER.

When closed, the motorized shade is completely hidden from view inside its case. The solid bottom panel gives the ceiling a clean appearance and protects the shade fabric from dust and dirt. At the touch of one switch or wireless transmitter, a separate motor opens the door into the case and then the motorized shade descends in front of the window.

Choose a glare control fabric—mesh or translucent—or a free-hanging room darkening fabric. The ULTIMATE ACCESS FLEXSHADE case and ceiling closure are white where visible at the ceiling line.

Maximum recommended height is 12'.

*Note: Side channels are not available. Ceiling tile flange is included, 3/8" wide, along the front, back and endcaps of the case.*

*Ultimate Access FlexShade.*

U.S. Patents  
5,341,241 and  
6,421,175.  
Other patents  
pending.

# Motorized FlexShade

*The simplicity of shades with the versatility of motorized operation.*

MOTORIZED FLEXSHADES by DRAPER offer the ultimate in high-tech convenience in a functional shading system. Choose from a wide range of attractive, light-filtering and light-blocking fabrics (pages 17-24) to enhance a building's energy efficiency. DRAPER's MOTORIZED FLEXSHADES offer the most intelligent sun control solutions.

MOTORIZED FLEXSHADES are available in any size from 2' through 14' wide. Larger sizes are available with FLEXSHADE 2 or COLOSSAL FLEXSHADE (pages 7 and 8).

MOTORIZED FLEXSHADES retract completely when not in use for an unobstructed view. Installation choices range from simple mounting brackets, to endcaps and fascia, to complete extruded pockets with bottom closure panels. Up to five MOTORIZED FLEXSHADES can even be coupled to reduce the number of motors required. Hardware descriptions are found on page 16.

MOTORIZED FLEXSHADES have compact, tubular gearmotors located within each roller for smooth, reliable operation. Depending on size, battens may be used to assure a smoother, flatter surface. A simple wall switch is included with each motorized unit. Or choose one of the most versatile motor control systems: INTELLIFLEX® gives you total flexibility in how you group, sub-group or individually control your shades. See page 3 for a complete description of control options.

*Coupled Motorized FlexShades with SW2600 fabric at the new home of Alvin Ailey American Dance Theater—The Joan Weill Center for Dance. Architects: Iu + Bibliowicz Architects LLP. Photography: © 2005 Bruce Katz. All located in New York, NY.*

*Motors are installed on the right-hand side as standard. They may be specified on the left.*

## Quiet Motors

QUIET MOTORS are now available from DRAPER for those installations where a quiet environment is a must. These high voltage motors run noticeably more quietly than standard motors, and do not have an audible "click" at start or stop. Please contact DRAPER for more information and restrictions.

## Motorized FlexShade Dimensions

Headbox/Endcaps or Fascia/Endcaps		Standard Brackets	
Small	Large	Small	Large
A <sup>1</sup>	3 7/8"	A <sup>2</sup>	2 1/2"
B <sup>1</sup>	1 15/16"	B <sup>2</sup>	1 3/8"
C <sup>1</sup>	1 11/16"	C <sup>2</sup>	1 5/8"
D <sup>1</sup>	3 3/8"	D <sup>2</sup>	3"
F <sup>1</sup>	2 5/8"	E <sup>2</sup>	3 1/16"

Maximum bundle diameter dictates the size of headbox with endcaps, fascia with endcaps, and standard brackets, which is governed by the size of shade and choice of fabric. Consult Draper to determine which size is required for your installation. Hardware details shown on page 16.

# FlexShade 2

12 24 00/DRA  
BuyLine 2718

*Motorized window shades with your choice of hardware styles and colors.*

FLEXSHADE 2 by DRAPER offers intermediate sized shades, between MOTORIZED FLEXSHADE and COLOSSAL FLEXSHADE. FLEXSHADE 2 is available in sizes 3' to 16' wide and up to 30' tall, depending on the fabric chosen.

The FLEXSHADE 2 features a spring loaded idler end for easy installation. Battens are used to ensure the flattest surface possible. Interchangeable ceiling/wall mounting brackets are standard. Optional fascia or headbox, either curved or squared, attaches to matching endcaps. Curved or squared fascia and headbox are available in five colors: clear anodized (standard), white, ivory, black and bronze.

Choose from a wide range of attractive, light-filtering and light-blocking fabrics to enhance a building's energy efficiency. A simple wall switch is included with each unit, or see page 3 for a complete description of control options.

## FlexShade 2 Hardware/Parts

# Colossal FlexShade

*Superior solar control for large window openings.*

DRAPER'S COLOSSAL FLEXSHADE is one of the largest motorized window shades on the market today. Available in sizes 3' to 28'9" wide and 30' tall. Depending on fabric, larger sizes may be available, and narrower shades can be fabricated up to 35' tall. Battens are used to assure a smoother, flatter surface.

COLOSSAL FLEXSHADE comes in its own housing, ready to install. Eyebolts for hoisting the shade are provided at each end of the extruded aluminum case that's finished in white. Our giant shade features a Deflection Compensation System, designed to minimize fullness caused by case deflection in extremely wide units.

Options include an internal junction box, reverse-roll fabric, WALL MOUNT BRACKET KIT, ENDCAP CEILING TILE FLANGE KIT and CEILING TILE FLANGE for front of headbox. Standard controls, low voltage controls and INTELLIFLEX controls available. See page 3 for details.

*Bottom of extruded aluminum case is fully enclosed except for slot allowing fabric passage. Bottom closure panel may be removed manually for access to roller and drive unit. Patent pending.*

# LightBloc FlexShade

For total darkness, specify LIGHTBLOC FLEXSHADES. Ideal for audio-visual, conference and training rooms. Precision engineered and custom built for each opening, LIGHTBLOC FLEXSHADES may be motorized or manually operated with bead chain clutch, crank or spring roller.

Choose from any of our room-darkening fabrics—a list is located below and to the right. When SB9000 or SB9100 is specified, our exclusive, patented FABRIC RETENTION SYSTEM prevents disengagement of fabric from the channels.

Durable anodized and painted finishes ensure an aesthetically pleasing installation. All hardware is available with clear anodized (standard), black, white, ivory or charcoal bronze finish.

System includes aluminum headbox, side and sill channels. No light gap at the headbox/side channel connection. Headboxes available to recess or surface mount (standard). Internal light seals and opacity plates eliminate all light leaks. Light proof hem bar recessed into light proof side channel. To ensure total blackout, caulking around perimeter is recommended. U.S. Patent No. 5,323,831.

## Operating Systems

**Motorized Operation**—Motor is located within the right (standard) or left end of the roller for smooth, reliable operation. A wide variety of control options are available: refer to page 3.

**Crank Operator**—Even the largest shades operate smoothly. The compact, bi-directional gear assembly can be mounted either on the right end (standard) or the left. Crank handle hinges to form a thin, straight rod at edge of window when not in use. The crank is permanently mounted (standard), or specify detachable and use a single crank for more than one shade.

**Bead Chain Clutch**—Unlike competitive clutches, the DRAPER bi-directional clutch never needs adjusting and can be mounted either on the right (standard) or left. Shades stop when chain is released. Stainless steel (standard) or nylon beaded chain hangs at the side, leaving the view unobstructed. An optional chain hold-down is designed to keep children from getting tangled in the cord. Up and down stops prevent shades from being raised or lowered too far. Our LIGHT SEAL KIT prevents light from coming through where the chain exits the headbox.

**Spring Roller**—Galvanized steel rollers and heavy-duty springs sized to operate safely and reliably. Roller is under constant tension, with a latching chain at sill (see detail at right).

## Dimensional Drawings—LightBloc System

Available in sizes through 8' wide x 10' high. Cannot be coupled. *Note:* For proper operation, LightBloc units must be installed square and plumb. Installers must be qualified craftsmen.

Inside mounting of LightBloc requires mounting angle, not shown.

# Manual FlexShade

## Window treatments with independent control.

MANUAL FLEXSHADES are a sensible choice for standard window treatments in all buildings. Choose from a wide range of attractive, light-filtering and light-blocking fabrics (pages 17-24) to enhance a building's energy efficiency.

Installation choices range from simple mounting brackets, to endcaps and fascia, to extruded pockets with bottom closure panels and side channels. Refer to hardware on page 16.

## Operating Systems

**Bead Chain Clutch**—Unlike competitive clutches, the DRAPER bi-directional clutch never needs adjusting and can be mounted either on the right (standard) or left. Shades stop when chain is released. Stainless steel (standard) or nylon bead chain hangs at the side, leaving the view unobstructed. An optional chain hold-down is designed to keep children from getting tangled in the cord. Up and down stops prevent shades from being raised or lowered too far. Our spring-loaded idler and universal brackets offer installation ease and flexibility. Optional SPRING ASSIST available. (Large units require fixed-pin idler.)

**Crank Operator**—Crank-operated FLEXSHADES offer complete reliability and precise light control with minimal effort. Even the largest shades operate smoothly. You can easily operate tall shades, wide shades, even groups of shades from a single controller. All shades are raised or lowered to exactly the same height.

Compact bi-directional gear assembly can be mounted on the right side (standard) or left. Attractive crank handle hinges to form a thin, straight rod at edge of window when not in use. Crank operator can be permanently mounted (standard) or detachable; up to 6' in length. Optional heavy-duty crank is available in lengths to 10'. Two-piece handle is available in greater lengths. In public areas, a detachable operator prevents unauthorized persons from operating the shades. Crank-operated shades are furnished with endcaps.

## Manual FlexShade Dimensions

Headbox/Endcaps or Fascia/Endcaps

	Small	Large		Small	Large
A <sup>1</sup>	3 3/8"	4 5/8"	A <sup>2</sup>	2 3/16"	2 3/16"
B <sup>1</sup>	NA	NA	B <sup>2</sup>	1 1/16"	1 1/16"
C <sup>1</sup>	1 1/16"	2 3/16"	C <sup>2</sup>	1 5/8"	2 1/4"
D <sup>1</sup>	3 3/8"	4 5/8"	D <sup>2</sup>	2 3/8"	3"
F <sup>1</sup>	2 3/8"	2 3/8"			

Consult Draper to determine which endcap or bracket size is required for your installation. These dimensions are accurate for all manually operated shades. See additional headbox and fascia details on page 16.

# Spring-Roller Shade

Simplicity of design, durable materials and careful workmanship make DRAPER SPRING-ROLLER SHADES America's first choice for institutional-quality light control and room darkening shades.

SPRING-ROLLER SHADES are designed specifically for institutional use and manufactured to endure the toughest conditions. DRAPER shades are custom made to fit your windows and individually tested before shipment to make sure they operate perfectly.

SPRING-ROLLER SHADES are offered in a wide range of room darkening and woven mesh fabrics. See pages 17-24.

## Features of Operating System

### Spring Roller

Traditional window shade operation. Metal rollers and heavy-duty springs operate any shade through 12' wide x 12' high.

### Large Diameter Institutional Metal Rollers

All shades are mounted on rigid steel rollers that house heavy-duty springs. Our ball-bearing style locking mechanism operates more smoothly than other devices on the market. Spring mechanism can be replaced easily in the field.

### Heavy-Duty Cadmium-Plated Hardware

Heavy plated steel hardware, complete with all necessary fasteners.

### Fabric Attachment

Fabric is attached to roller with 3M VHB industrial adhesive, designed to withstand high temperatures and moisture. Adhesive attachment is stronger than mechanical methods and maximizes surface flatness.

### Heat Seamed

Hems are heat seamed for added strength. Prevents hems from raveling and tearing. Optional double-needle stitching provides the strongest sewn hem available.

### #4 1/2 Large Size Cord

Hard braided large diameter cotton cord, attached to slat with screw eye and cord clasp. Screw eye doesn't weaken slat like punched eyelet holes used on shades of lesser quality.

### Kiln-Dried Hard Maple Slats

Indiana hard rock maple, 7/8", 1 1/4" or 1 1/2", at our discretion. Ten times stronger than pine slats. No "finger joints".

### Each Shade Individually Tested

Every DRAPER shade is individually tested before shipment for perfect operation.

Spring-Roller Shades with SB9000 at the Hoosier Gym, home court location for the movie "Hoosiers", Knightstown, IN. Installation: Fred Mann, New Castle, IN. Photography: Wayne Williams, Indianapolis, IN.

# Skylight FlexShade

*Reliable and easy to install.*

An unprotected skylight can generate intense heat and glare. SKYLIGHT FLEXSHADES are the ideal remedy. Inconspicuously recessed into the skylight opening, a SKYLIGHT FLEXSHADE provides sunlight and UV control to protect people and furnishings. Two operating systems are detailed below: motorized SKYLIGHT FLEXSHADES are available in sizes up to 12' x 12'. Crank-operated SKYLIGHT FLEXSHADES are available up to 8' x 12'. SKYLIGHT FLEXSHADES can be installed at any angle as long as the rollers are parallel to the floor.

Select a mesh fabric for light filtration or SUNBLOC for complete opacity. Five choices of hardware finishes: clear anodized (standard), black, white, ivory or bronze enamel. DRAPER recommends lighter color fabrics and hardware to absorb less heat. Venting space between shade and glass recommended.

## Operating Systems

**Motorized Operation**—Are your skylights inaccessible? Specify motorized SKYLIGHT FLEXSHADES. Unlike competitive products, DRAPER SKYLIGHT FLEXSHADES only use one motor because the spring roller opposite the electric motor maintains constant tension. This feature makes installation easier. Roller boxes and side flanges can be recessed into the skylight opening. Perimeter support angles simplify installation. Side flanges prevent direct light leaks. A variety of control systems are available for motorized SKYLIGHT FLEXSHADES: refer to page 3.

**Crank Operator**—Manually operate easy-to-reach skylights with a gearbox/detachable crank combo. Available in sizes through 8' x 12'. Specify length of crank required (up to 6' in standard configuration; heavy-duty crank available to 10' long). Bell-shaped connector makes crank easy to attach. Spring roller opposite crank maintains constant tension.

Due to the force of gravity, SkyLight FlexShades are available to a maximum unsupported width of 42". Larger units require one or more support cables, up to a maximum of 12' wide x 12' long. Cables are 3/16" dia. vinyl clad aircraft cable. Units over 8' wide must be motorized, inside mount, with 4 5/8" x 4 5/8" headbox and 2 1/4" dia. spring roller.

**Fabrics** Fabric selection is illustrated on pp. 17-24.

## Dimensions & Installation

Complete details available at [www.draperinc.com](http://www.draperinc.com)

SkyLight FlexShade with "E" Screen 5% at Lawrence North High School. Installation: SPD Textile & Drapery, Inc. Photography: Brian Bookwalter. All of Indianapolis, IN. Shown closed above, partially open below.

Note: To facilitate proper operation, SkyLight FlexShades must be installed square and with rollers level. Installers must be qualified craftsmen.

Recess all components into the skylight opening (below right). With outside mount installation (at left), separate header bars must be attached at both ends to house the support cable system. With outside installation, fabric stay pockets are visible from inside the room on all sizes of SkyLight FlexShades. Dimensions shown are for SkyLight FlexShades 8' wide and under.

# FlexShade Panels

FLEXSHADE fixed frame panels provide sunlight filtration at a lower cost than operable solutions. They are particularly well suited for skylights and sloped glazing in solariums or odd-shaped openings. (Not suitable for curved framing).

Use FLEXSHADE PANELS to help prevent ultraviolet damage to expensive textiles and furniture located in direct sunlight. Relieve the discomfort from solar heat and glare often associated with unprotected glazing. Choose a fabric from the list below (fabric details on pages 17-24). A wide range of openness factors are available, ranging from 3% to 23%.

FLEXSHADE PANELS are permanently attached to lightweight aluminum frames. Heavy-duty fixed panels utilize an extruded aluminum frame. Frames are available in dark bronze, white or mill finish aluminum (standard). Panels mount easily on surface or within framing of windows with clips (see details below). Clips allow removal of FLEXSHADE PANELS for routine maintenance and cleaning.

Available in sizes up to 5' x 10'. Panels exceeding 40" in length require a center support member.

## Installation of Interior Panels

### Inside Mounting

## Installation of Exterior Panels

FLEXSHADE PANELS for exterior use are easy to install. Install mounting channels first. Then, slide fixed panel in from lower end. Install keeper track to secure panel in frame. At maintenance time, simply remove the bottom keeper, and slide out the fixed panel.

### SunScreen® SW1000 by Phifer—

For reducing solar heat gain in the summer and heat loss in the winter. SUNSCREEN® may be installed on the exterior or interior of glass areas. SW1000 is a vinyl-coated fiberglass, woven in a ribbed pattern. Virtually maintenance free—non-combustible and will not rust, corrode, shrink, scratch or stain. Approximate openness factor of 23%. Up to 84" roll width. 8.5 oz./sq. yd., .019" thick. Available in five colors.

# Roman FlexShades

ROMAN FLEXSHADES provide an elegant, softer alternative to traditional roller shades, blinds and draperies. Perfect for spaces requiring a "custom" look.

Valance (included) completely conceals the operating mechanism. The award-winning Rollease No-Sew™ System means there are no visible stitches in the fabric—clearly superior to any other method of attaching slats.

Choose a soft, gently draping textile with complete opacity, or select from our wide variety of light-filtering woven mesh fabrics. Available in a broad range of sizes, for small windows or wide expanses. May be installed inside or outside the opening.

## Operating Systems

**Motorized Operation**—For maximum reliability and convenience. Motor is located inside the right (standard) or left end of the roller. 115 volt tubular gearmotor easily interfaces with a variety of control systems (details on page 3).

**Clutch**—DRAPER's clutch system operates approximately five times faster than competitive systems. The clutch never needs adjusting and can be mounted either right (standard) or left, as preferred. Stainless steel bead chain is standard.

Above: Roman FlexShades. Light filtering fabric is SheerWeave® by Phifer, color SW2100 White/Platinum, 10% open. Installation by Tom Stuckey, Window Watchers, Fort Wayne, IN. Photography by Jeff Bell, Fort Wayne, IN.

# Snugfold

## *The folding window shade.*

SNUGFOLD shades are designed to cover large glass areas such as those found in classrooms, cafeterias, and gymnasiums.

The SNUGFOLD folds and unfolds smoothly and easily by means of a simple and reliable cord and pulley system. Cord locks enable shade to be stopped at any point. Color-coordinated #7½ cords. Permanently attached matching valance conceals hardware.

Simplicity of design and quality components make the SNUGFOLD an economical and practical way to darken multiple window openings. Only manufactured with COLONY fabric (below). COLONY is available in 12 attractive interior colors, with a uniform white exterior. Sizes through 15' wide x 12' high.

Three intermediate maple slats allow the SNUGFOLD to fold to approximately one-sixth its total height. Steel stays are midway between each slat to keep folds smooth and flat. Large-diameter, self-lubricating nylon pulleys are housed in heavy-gauge, brass-tone plated steel frames. Cord locks are integral to pulley frame for maximum strength and ease of operation.

*Above: Snugfolds installed at Test Middle School, Richmond, IN. Installation: Fred Mann, New Castle, IN. Photography: Wayne Williams, Indianapolis, IN.*

*At right: Normally hidden by the valance, three nylon marine pulleys with automatic cord lock control the operation.*

*Snugfold in fully up position stacks in approximately one-sixth of its original height.*

*Snugfold in the intermediate position.*

*Snugfold in the down position.*

**Colony (CL8000)**—Close woven fiberglass base textile with sun-resistant vinyl film securely bonded to each side. Opacity is 90%. Resists fading, mildew and flame; washable and tear proof. COLONY is available in 12 interior colors, with a uniform white exterior. Also available, but not shown—CL8010 White and CL8080 Black. Up to 72" roll width in most colors. Meets NFPA-701 fire retardant standards.

# Hardware for FlexShades

**Mounting Brackets**—The standard mounting hardware supplied for wall, ceiling or jamb installation of DRAPER MOTORIZED and MANUAL FLEXSHADES is a pair of brackets. As an option for a pair of 1½" brackets, white bracket covers are available. If optional fascia or headbox is specified, then endcaps, not brackets, are supplied.

**Fascia**—As an option for MOTORIZED and MANUAL FLEXSHADES, extruded fascia hides hardware and roller. May be mounted inside or outside of jamb using matching endcaps. Available in clear anodized finish (standard), black, white, ivory, or charcoal bronze. 3¾" or 4¾" high as required (consult DRAPER to determine fascia size required for your installation). Printed color at right may vary from actual aluminum. Color samples available upon request.

**Surface-Mounted Headbox**—Complete extruded headbox is available to hide hardware and roller as an option for MOTORIZED and MANUAL FLEXSHADES. Two-piece assembly is suitable for surface mount to head, jamb or wall, in sizes 3¾" high or 4¾" high as required (consult DRAPER to determine size required for your installation).

**Pocket-Style Headbox**—Complete extruded headbox is available for ceiling recessed installation. In sizes 3¾" high or 4¾" high as required (consult DRAPER to determine size required for your installation).

**Wall Clip with Closure**—Pocket already exists? Specify FLEXSHADE Wall Clip with a long or short closure. Wall Clip mounts to the wall and bottom closure panel drops neatly into place without fasteners, leaving a minimal slot through which the shade descends. For sleek appearance, use continuous wall clip. Closure sizes 1¾" or 3".

**Couplers**—DRAPER'S FLEXSHADE COUPLING SYSTEM lets one motor drive up to four additional shade rollers, or a crank operator may drive two additional rollers. The advantages are apparent: reduce the number of operators required, and you reduce the cost of the project and simplify the electrical portion of the contract.

The shades coupled together may be of different widths. Coupled shades must be same height. The overall width of a motorized group may not exceed 30'; crank-operated groups may be up to 20' wide.

COUPLERS fits 2" diameter rollers. Brackets extend 2½" from mounting surface to center line of roller, and may be wall or ceiling mounted. Ideally, install FLEXSHADE COUPLING SYSTEM in DRAPER TYPE D POCKET or existing pocket. Coupled units may also be installed in 3¾" and 4¾" DRAPER ceiling pockets. Fascia is available. (Not suitable with LIGHTBLOC FLEXSHADE.)

© 2005 Bruce Katz

**Side Channel or "L" Angle**—Prevent direct light gaps at the sides of your shade fabrics by installing side channels or "L" angles. Side channels are ¾" deep x 1¾" wide, and mount to the jamb or face of the window opening. "L" angles measure 1" x ¾" or 1" x 2¾" (available in black, white, ivory, charcoal bronze or clear anodized finish) and mount inside the jamb.

## Type D Pocket

Aluminum pockets offer a convenient architectural solution for mounting either **MOTORIZED** or **MANUAL FLEXSHADES** at the curtain wall. For clean, flush installation, use extruded **TYPE D POCKET**. With bottom closure panel in place, only a narrow slot is visible. (Consult **DRAPER** to determine size required for your installation).

Installation of **TYPE D POCKET** in coordination with ceiling finishing allows for later installation of shades; adding flexibility during the construction process. Smooth, continuous closure simply drops into pocket without fasteners for a completed look.

**TYPE D POCKET** may be anchored through top. Pockets are finished in white. **FLEXSHADES** are installed using standard ceiling brackets. Suitable for use with clutch-operated or motorized **FLEXSHADES**.

**DRAPER'S TYPE D POCKET** cross-section dimensions are  $4\frac{1}{2}"$  deep x  $4\frac{5}{8}"$  high. Comes in 12' lengths. A tile-support flange along lower edge supports lay-in ceiling. Pre-welded corners and pocket ends are available. Endcaps are optional and are available with or without tile flange.

## FlexShade Fabric Selection

**DRAPER FLEXSHADES** are available with a wide variety of mesh, opaque and room darkening fabrics from national and international manufacturers. Three new fabrics add to the diversity. The following key identifies four properties of shade fabrics and openness factors. Normally, dark colors provide better glare control because they absorb light. Light colors offer better heat control because they reflect heat. Duplex fabrics offer both glare control and heat control.

*Natural light can be beneficial to health in the working environment. Ensuring protection against glare and reflection is essential when choosing window shade fabric openness. Window shade fabric openness selection should be based on building position, geographical location or exposure area, office activity, and the view—clear or obstructed.*

*Use the charts below to make recommendations for window shade openness factor to control glare and work station reflections, for UV protection and for better view through capabilities.*

*Use the symbols at right to find the fabrics on pages 18-22 that meet your design requirements.*

**SheerWeave® Jacquard Series SW5000 by Phifer**—This unique collection of jacquard designs takes the function of sun control to a whole new level of interior window treatment decor, making sun control truly beautiful. The line, inspired by nature, is a collection of 16 different fabrics, woven with diverse textures and rich colors. Made with an open weave that lets in natural light while filtering out the sun's heat. Openness factor is 5% to 10%. Available in 74" roll widths. Average 13.0 oz./sq. yd. to 14.9 oz./sq. yd., .041" thick. Fire rating: The diversity of SW5000 fabrics means that different colors and weaves meet different standards for fire retardancy. Please inquire about colors, weaves, and fire retardant standards.

## Room Darkening Fabrics

**SheerWeave® Series SW7000 by Phifer**—Opaque, PVC-free polyester with the look and feel of rich cloth. Acrylic foamed backing. 94" roll width, .018" thick, 10 oz./sq. yd. Fire ratings: California U. S. Title 19 (small scale), NFPA 701-1999 TM#1 (small scale), British Standard 5867.

**SheerWeave® Series SW7100 by Phifer**—PVC-coated fiberglass laminated with a 2-ply PVC film. 72" roll width, .023" thick, 19.8 oz./sq. yd., opaque. Meets NFPA-701-1999 TM#1 (small scale) and California U.S. Title 19 (small scale) standards.

**1260 by Hexcel**—100% glass fabric coated with fire-proof acrylic. PVC-free, blackout fabric. White acrylic back. The classic blackout with textile feel. Available in 5 colors; additional colors available with minimum quantity requirements. 71" roll width, 12.4 oz./sq. yd., .0138" thick. Meets NFPA-701 fire retardant standards.

**1309 by Hexcel**—100% glass fabric coated with fire-proof acrylic. PVC-free, blackout fabric. Approximately .011" thick. 82½" roll width, 4.75 oz./sq. yd. Meets NFPA-701 fire retardant standards.

**SunBloc Series SB9000/9100**—Whenever true opacity is required. Perfect for rooms where audio visual presentations are made. Room-darkening fabric constructed of tough, close-woven fiberglass coated on both sides with durable, sun-resistant, flexible vinyl. Flame, fade and mildew resistant; washable and tear proof. 36", 45", 54", 63" and 72" roll width, 12 oz./sq. yd. Meets NFPA-701 fire retardant standards. Specify SUNBLOC in any of 14 opaque colors: 8 duplex (with white exterior), and 6 with the same color inside and out. Use SUNBLOC as part of a LIGHTBLOC SHADING SYSTEM when total darkness is needed. Also available, but not shown—Black/White SB9170, Burgundy/White SB9180, Navy/White SB9190.

# More Room Darkening Fabrics

## *Roc-rol™ by Rockland*—

Roc-rol opaque fabric by Rockland Industries provides an economical room darkening fabric in a variety of colors. The cotton/poly blend fabric has a natural look and is relatively thin—so tall shades will have smaller bundle sizes than those made with thicker fabrics. All colors are white on the backside providing good solar reflectance. 84" roll width. 13.5 oz./sq. yd., .025" thick. Meets NFPA-701 fire retardant standards.

*Flocké by 3-G Mermet*—Opaque, PVC-free fiberglass base material from one of Europe's premier weavers. White exterior with a choice of 15 interior colors. Room side of fabric has a soft woven finish, unlike most blackout fabrics. Perfect for areas requiring opaque shades with an elegant look. 78" roll width. Rot proof. Meets NFPA-701 fire retardant standards. Additional colors, not pictured: Mangué (mango) MF1611, Soleil (gold) MF1607, Seychelles (turquoise) MF1612, Chêne (brown) MF1617, Coraline (light beige) MF1625, Angora (pale grey) MF1626.

## Translucent Fabrics

*1277 by Hexcel*—A light filtering, PVC-free and halogen-free, 1% open fabric made of acrylic coated fiberglass yarn. Translucent privacy fabric filters light while blocking glare and heat. Available in 6 colors; additional colors available with minimum quantity requirements. Meets NFPA-701 fire retardant standards. 71" roll width. 5.75 oz./sq. yd., .0098" thick.

*Obion by 3-G Mermet*—Room darkening fiberglass base material. Looks similar to FLOCKÉ, but with a softer feel. Anti-static treated. Rot proof. White exterior with a choice of 4 interior colors. Slight visible transmittance of light with the colors Sahel and Blanc—each has a slight translucency, but the look of an opaque material. 78" roll width. Meets NFPA-701 fire retardant standards. Not for SKYLIGHT FLEXSHADES. Seams and slat hems sewn, not heat sealed.

## Graphics on FlexShades

*Put your logo or virtually any graphic on shades.*

You provide the artwork, and we'll print your logo or graphic. Ideal for situations where restrictions are imposed on signage. You can put your logo or ad on the side of the shade facing out, and display it to the world. Graphic can be printed on either side of the window shade. (See your DRAPER representative for restrictions and available fabrics.)

We use a high quality, digital four-color process to assure a crisp and clear image. Order for graphics must accompany shade order.

# Fenestration Data

DRAPER offers test data for the specifier's use in controlling light and heat, view and privacy, and glare level. Representative figures appear below; contact DRAPER to receive this data on any fabric we offer.

**Solar transmittance ( $T_s$ ), reflectance ( $R_s$ ), and absorptance ( $A_s$ )** add up to 100%, indicating that all the sun's energy striking the shade is reflected, absorbed, or passed through. Lighter colors have a high  $R_s$  factor, and reduce heat most effectively. Dark colors have a low  $T_s$  factor and reduce light most efficiently.

**Visible transmittance ( $T_v$ )** indicates the amount of glare likely to be perceived. This is most critical when windows are oriented to face direct sunlight. Darker colors minimize glare.

**Openness factor (OF)** concerns the density of the weave. Denser weaves afford more privacy, while more open weaves provide a better view.

## Solar-Optical Properties for SheerWeave® PW3500—

		$T_s$	$R_s$	$A_s$	$T_v$	SC ¼" Clear Glass
PW3510	Snowy White	16	68	16	12	.32
PW3520	Bone	14	49	37	12	.44
PW3525	Greystone	10	34	56	9	.52
PW3540	Soft Grey	8	27	65	9	.56
PW3545	Granite	11	41	48	10	.48
PW3555	Ash	7	11	82	8	.66
PW3560	Linen	15	57	28	13	.39
PW3570	Ebony	6	5	89	8	.69
PW3580	Tobacco	7	5	88	8	.70

**Shading coefficients (SC)** are best interpreted by heating/cooling professionals. Lower SC figures indicate greater shading efficiency.

All fenestration data is based on laboratory conditions. Results may vary in actual field installations.

## Solar-Optical Properties for Screen²—

XL2-7180 White/Charcoal	6	48	46	6	.44
XL2-7195 White/Sand	11	61	28	8	.39

Screen² is also available with 10% openness factor.

## Award-Winning Marketing Support

The McGraw-Hill Construction Information Group, publishers of Sweets, awarded DRAPER, INC. its "Best in Sweet's—Most Outstanding Marketplace Program (Print and Electronic)" award for 2005. According to Sweets, "Winners in this category represent the finest examples of marketing in the construction Marketplace. Utilizing print and electronic programs, they create a complete, easy-to-use resource for industry professionals."

Please visit us 24-hours a day on the Web at [www.draperinc.com](http://www.draperinc.com) to download specifications, CAD details, submittals and installation instructions. To receive an architectural specification CD-ROM, product cut sheets or additional literature, contact Draper by calling, faxing or e-mailing.

## A Word About Draper

Established in 1902 as a manufacturer of window shades for schools, today DRAPER offers three major product lines in addition to our FLEX-SHADE SYSTEMS—projection screens and related audio-visual equipment (CSI section 11 52 13); lifts and mounts for video projectors and plasma displays (CSI section 27 41 23); and gymnasium equipment, featuring the EZ FOLD basketball backstop (CSI section 11 66 00). We welcome you to visit our web site for complete specifications, CAD details, submittals and installation instructions for all of our product lines: [www.draperinc.com](http://www.draperinc.com).

## Continuing Education

DRAPER, INC. is a Registered Provider for the American Institute of Architects (AIA) continuing education program. The AIA/CES program allows architects to keep current and gain new knowledge and skills. It also enables AIA members to fulfill a membership requirement and meet state mandatory continuing education requirements. The course below offers AIA members one AIA/CES learning unit.

Window Shades 101 provides participants with a comprehensive strategy for selecting window shade fabrics, reviewing elements such as texture, health, safety, welfare and energy conservation. For more information, visit [www.draperinc.com](http://www.draperinc.com) or [www.aia.org](http://www.aia.org).
